

Vacuum Heat Treated CNC Lathe Parts with HRC48-52 Hardness and 7-15 Days Lead Time in Metallic Silver

Our Product Introduction

for more products please visit us on lathecnmachining.com

Basic Information

- Brand Name: Industrial Man
- Model Number: OEM

Product Specification

- Productname: CNC Lathe Parts
- Precision: High Precision Machining
- Lead Time: 7-15 Days
- Applications: Machinery Industry, Automotive Industry
- Function: Automobile, electronic, machinery Ect
- Port: Shenzhen
- Advantage: High Precision
- Color: Metallic Silver Or Customized
- Highlight: Vacuum Heat Treatment CNC Lathe Parts, HRC48-52 Hardness Computer Numerical Control Parts
7-15 Days Lead Time Computerized Lathe Parts

Product Description

Vacuum Heat Treatment HRC48-52 CNC Lathe Parts

Precision-Engineered Metal Components with 7-15 Day Lead Time

Our Product

Our CNC Lathe Parts are precision-engineered components designed for modern manufacturing processes. Manufactured with advanced CNC technology and strict quality control, these parts deliver superior accuracy, durability, and efficiency for industrial applications.

Key Features

- Customizable Design:** Tailored to meet specific size and specification requirements
- High Precision:** Tight tolerances for accurate CNC machining components
- Durable Construction:** Vacuum heat treated to HRC48-52 hardness
- Fast Turnaround:** Typical lead time of 7-15 days
- Versatile Applications:** Suitable for machinery and automotive industries
- Material Options:** Available in metallic silver or customized finishes

Technical Specifications

Parameter	Details
Applications	Machinery Industry, Automotive Industry
Heat Treatment	Vacuum Heat Treatment + HRC48-52
Color	Metallic Silver or Customized
Precision	High Precision Machining
Weight Range	0.5-5 Kg (varies by part)
Lead Time	7-15 Days
Shipping	5-25 Work Days

Industrial Applications

These CNC lathe parts are essential components for:

- Precision machinery maintenance and enhancement
- Automotive engine components and assembly systems
- Metalworking and fabrication equipment
- Aerospace and heavy machinery manufacturing
- Electronic and industrial tool production

The vacuum heat treatment process ensures exceptional durability and wear resistance, making these parts ideal for high-stress environments. Their customizable design allows for perfect integration with existing equipment, optimizing performance and reducing downtime.
